

Subhash Pavan Chakravarthy

Data Engineer

subhashpavan2000@gmail.com | 437-966-2274 | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY:

Data Engineer with 4+ years of experience building scalable ETL/ELT pipelines on Microsoft Azure using ADF, Databricks (PySpark), and Synapse Analytics. Strong in SQL, Python, and end-to-end pipeline delivery-from ingestion and transformation to warehousing and monitoring. Currently deepening expertise in Delta Lake and streaming pipelines.

TECHNICAL SKILLS:

Cloud : Azure Data Factory, Azure Databricks, Azure Synapse Analytics, Logic Apps, Azure Data Lake
Data Engineering : ETL/ELT Pipeline Design, Incremental Load Patterns, Delta Lake, Data Modeling, SCD Type 1 & 2, PolyBase, Apache Kafka
Programming : Python, PySpark, SQL, Spark SQL
Reporting Tool : Power BI, Tableau Desktop
Databases : Azure SQL Database, MySQL, PostgreSQL, SQL Server, Snowflake (basic)
Orchestration : Azure Data Factory (V2), Apache Airflow (basic)
Version Control : Git, GitHub, Azure DevOps, CI/CD Pipelines, GitHub Actions
Other tools : Visual Studio, Postman and JIRA

WORK EXPERIENCE:

TELUS| Toronto, Canada

August 2025 to Present

Data Engineer

Responsibilities:

- Built Azure data pipeline development using ADF, ingesting data from Azure SQL, ADLS, Blob, and REST APIs into Data Lake Gen2 with error handling.
- Developed parameterized pipeline frameworks with Key Vault-backed connections, cutting new-source onboarding time by ~30%.
- Implemented SCD Type 1 & 2 logic using PySpark notebooks in Databricks for Synapse Analytics dimension tables.
- Designed incremental load patterns via control tables, reducing data processing volume on high-frequency pipelines.
- Migrated on-premises SQL Server data to Azure Synapse Analytics and Azure SQL DB with validated data integrity post-migration.
- Managed CI/CD deployments via Azure DevOps and collaborated with 4+ cross-functional stakeholders to design scalable data architecture and improve data availability.
- Established a robust logging and alerting infrastructure in ADF, which enhanced pipeline failure visibility and accelerated mean time to resolution for production workflows by 8%.

Tools: Azure Data Factory, Azure Data Bricks, PolyBase, Azure DW, ADLS, Azure DevOps, BLOB, Azure SQL Server, Azure DW, Azure Devops, Azure synapse.

Moneris | Toronto, Canada

May 2024 to August 2025

Data Engineer

Responsibilities:

- Migrated complex data extraction processes from Mainframe, SQL Server, and IBM DB2 using ADF into Azure cloud, reducing data processing time by 35% for downstream analytics.
- Architected multi-source ELT workflows ingesting data into Azure Data Lake and Synapse, supporting 10+ enterprise BI reports across 5 business units.
- Diagnosed and resolved system inefficiencies within Azure Databricks clusters, boosting Spark job performance by 12% and ensuring optimal data processing workflows.
- Migrated Data Warehousing objects from Teradata to Snowflake, implementing Snowpipe for automated continuous data loading.
- Implemented Azure SQL Database solutions including Elastic Pools and SQL Managed Instances for scalable transactional workloads.
- Established CI/CD pipelines in Azure DevOps, reducing ADF artifact deployment time by 15% across environments.
- Collaborated with stakeholders to design and deliver 5+ scalable data architectures supporting critical business intelligence and reporting solutions.

Tools: Azure Data Factory(V2), Azure Data Bricks (PySpark, Spark SQL), Azure Data Lake, Azure BLOB Storage, Azure ML, Azure SQL, Hive, Git, JIRA, HQL, Snowflake, Teradata.

Accenture | India

August 2021 to February 2023

Data Engineer

Responsibilities:

- Streamlined Azure SQL database operations, improving overall query efficiency by 15% via refined data modeling and schema optimization.
- Migrated on-premises SQL Server databases to Azure Synapse Analytics and Azure SQL DB, ensuring data integrity and minimal downtime during cutover.
- Implemented Geo-Replication and Disaster Recovery failover configurations across Azure regions for high availability.
- Optimized ADF V2 pipeline performance by implementing efficient mapping data flows and scheduling triggers, securing critical credentials via Key Vault Linked Services.
- Optimized complex SQL queries and data workflows across reporting systems, reducing data processing time by 10% through indexing and tuning.
- Guided 5 crucial stakeholder discussions for requirement analysis, ensuring seamless integration of data solutions with strategic business objectives.

Tools: Microsoft SQL Server, Azure Synapse Analytics, Azure Data Lake & BLOB, Azure SQL, Azure data factory, Azure analysis services.

Education:

Bachelor of Engineering, Information Technology from SRKR Engineering College, India

Post graduate, Artificial Intelligence and Data science from Loyalist College Toronto
