

SUMMARY

Supply Chain Specialist with **4+ years** of experience utilizing SQL, Excel, and BI platforms to optimize end-to-end logistics and inventory operations. Skilled in querying transactional databases and building analytical models to forecast demand, reducing stockouts by 20% and improving operational efficiency by 15%. Proven track record of automating reporting pipelines, leading cross-functional teams, and executing strategic projects that reduce operational costs.

EXPERIENCE

Johnson & Johnson | Supply Chain Specialist

Jan 2025 - Current

- Steered the planning phase of 3 strategic supply chain improvement projects, collaborating with stakeholders to guarantee seamless transitions and resulting in \$35,000 cost savings/project.
- Orchestrated the creation of automated Power BI reports utilizing SQL to query underlying transactional databases, visualizing pivotal supply chain metrics like on-time delivery and inventory turns, and cutting manual reporting time by 12 hours weekly.
- Piloted a comprehensive audit process across the supply chain, elevating compliance scores from 78/100 to 92/100 and ensuring full preparedness for external regulatory reviews.
- Negotiated with vendors and carriers to optimize contracts, resulting in a 10% reduction in freight expenses and enhanced service reliability.
- Collaborated with external operations and supply planning teams to gather weekly on-time delivery data for biweekly and monthly leadership reviews, ensuring transparency and accountability across the supply chain.

Metro Supply Chain Inc. | Supply Chain Specialist

May 2021 – Mar 2024

- Revitalized end-to-end supply chain operations from procurement to customer delivery, earning commendation from the VP of operations for contributions to reducing delivery times by 20 hours.
- Implemented process improvements in warehouse management by analyzing data to optimize picking routes and storage layouts, which increased operational efficiency by 15%.
- Directed a cross-functional team of transportation and warehouse staff to streamline logistics operations, while meeting stringent safety standards and trimming average delivery times by 1 day.
- Analysed supply chain data using SQL to forecast demand and manage inventory levels, resulting in a 20% reduction in stockouts and improved customer satisfaction.
- Directed cross-functional teams in creating automated Tableau dashboards using real-time data, improving data accuracy for 95% of key metrics while reducing reporting time by 6 hours per person.

TECHNICAL SKILLS

- Supply Chain Management:** End-to-End Supply Chain Operations, Strategic Sourcing & Procurement, Demand & Supply Planning, Logistics Management, Warehouse & Inventory Management (WMS), E-commerce Fulfilment, LastMile Delivery, SAP S
- Technology & Analytics:** SQL, ERP Systems (SAP), Business Intelligence (BI) Tools, Predictive Analytics, Microsoft Excel (Advanced), WMS Integration, Power BI, Tableau
- Project Management:** Agile Methodologies, Scrum, Waterfall, Project Planning, Stakeholder Management, Risk Management, Cross-Functional Team Leadership, Resource Allocation
- Cost Reduction Techniques:** Value Engineering, Lean Manufacturing, Six Sigma, Total Quality Management, Process Optimization, Kaizen, Activity Based Costing, Budget Management

PROJECTS

Cardiac Arrest Analysis

- Implemented K-Means clustering to analyze cardiac arrest data, identifying optimal clusters using the Elbow Method, resulting in 6 distinct clusters.
- Applied Agglomerative Clustering to validate findings, achieving a silhouette score of 68% for clustering accuracy.
- Utilized hierarchical clustering with a dendrogram for medical risk assessment insights

Flight Fare Case Study

- Leveraging machine learning, I developed a robust Airfare Price Prediction model. By analyzing key features such as airline, journey details, and duration, the model accurately forecasts flight ticket prices.
- I implemented various regression algorithms and fine-tuned the best performer, achieving impressive results.
- Model achieved an accuracy of 85%, resulting in cost-savings of an average of 20% in airfare expenses.

Loan Status Classification

- Employed data preprocessing techniques to handle missing values by replacing them with the mean, ensuring data integrity and completeness.
- Utilized exploratory data analysis (EDA) techniques such as box plots and scatter plots to visualize the distribution and relationships between key features like 'LIMIT_BAL', 'AGE', and 'PAY_AMT6'.
- Developed a predictive model using the Gaussian Naive Bayes classifier to classify loan default status, achieving a respectable accuracy score.

EDUCATION

Loyalist College PG in Artificial Intelligence and Data Science	Belleville, ON Dec - 2025
SRKR Engineering College Bachelor in Information Technology	AP, India Jul - 2021
